Karen AP7

CHAPTER III

PHYSICAL CHARACTERISTICS

142 The Karen are of medium height. On the plains they average about five feet, four inches, in stature, and in the hills they are about [164] three inches shorter. The women are smaller than the men.[1] The hill people have the harder struggle for a livelihood and are also more liable to attacks of malaria. The Brecs show evident signs of stunted growth. On the plains and in the more fertile lower hills we find that the Karen are a stocky race with broad, well-built bodies, strong legs, and well-rounded calves. The legs are often short in proportion to the body. Karen players on a football team are usually noticeable for their sturdy appearance, in contrast with the slimmer Burman boys. They are capable of considerable physical exertion, but soon tire. [516] The women are well formed and buxom. They have an erect carriage, being used to bearing heavy burdens on their heads or backs. Their teeth, like the men's, are stained with continual betel chewing. In the hills their lack of bathing and their accumulations of beads and charms detract from their appearance; but when they have taken on more cleanly ways they become not unattractive. Their youth is cut short by heavy work in the field, constant childbearing, and nursing, and soon the signs of age appear.

The color of the Karen varies all the way from a light olive complexion to a dark coffee brown. On the whole, their color could be said to range between that of the Burmans and the Chinese. Those who work indoors are, of course, lighter than those who work in the open. Many skins have a distinctly yellowish or red-

[141]

[1] I took a few measurements with the tape line, and found that about seventy men on the plains gave the above average. The tallest was five feet, nine inches, and the shortest was four feet, eleven inches. In the hills my measurements were confined to one village. Here the headman was the tallest, measuring five feet, six inches. The shortest man in the village was four feet and eleven inches in height. Of about twenty women measured the tallest was five feet, five inches, and the shortest, four feet, nine inches. Three were each four feet, ten inches. The average among the women was a very small fraction over five feet. Dr. Mason gives the shortest man, a Bghai chief, as being only four feet, eight inches high, while the shortest woman he measured was four feet, five inches tall. (*Jour., Asiatic Soc. of Bengal*, Vol. XXXIV, p. 7.) MacMahon notes that in the Red Karen country the women are usually as tall as, if not taller than, the men. (*The Karens of the Golden Chersonese*, p. 34.)
